

Leveraging LLMs with Spring Al

## Spring Al

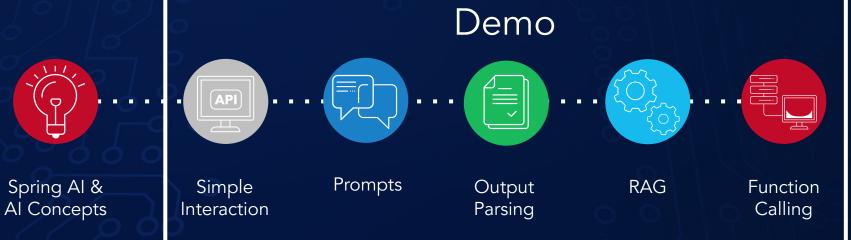

#### Kyle Hoehns

- Professionally tackling software problems since 2011
- Agriculture and Insurance Industries
- Source Allies since 2021

### Agenda

## Spring Al

"The Spring AI project aims to streamline the development of applications that incorporate artificial intelligence functionality without unnecessary complexity."

#### Timeline

- First commit in July 2023
- Experimental tags removed in December 2023
- Currently 1.0.0-M3

#### Al Models

Algorithms designed to process and generate information. Their training allows them to make predictions using insights from data sets.

#### Spring Al Support:

Amazon Bedrock, Anthropic Claude, Azure Open Al, Google Vertex Al, Groq, HuggingFace, MistralAl, MiniMax, Moonshot Al, Ollama, OpenAl, QianFan, ZhiPu Al, and Watsonx.Al

### Prompts

Building blocks for communication with Al Models that guide the model to producing relevant responses.

### Retrieval-Augmented Generation (RAG)

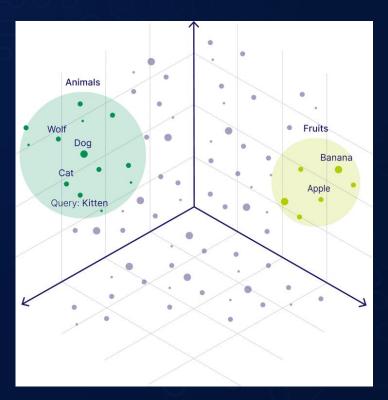

Store documents in vector storage related to data the model may not know about.

#### Vector Storage

Store data alongside the data's vector embeddings.

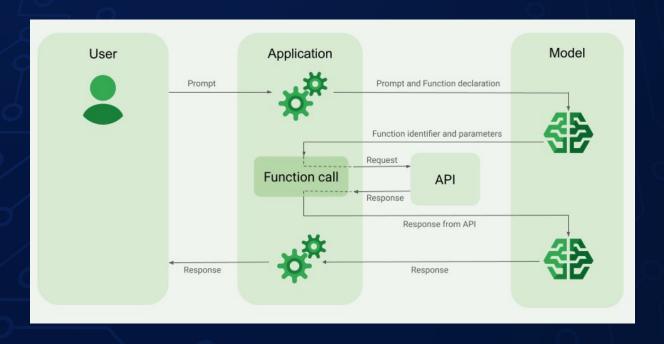

Embeddings are arrays of floating point number that measure the relatedness of two entries.

#### Function Calling

Provide the model with the knowledge of other tools it can utilize to help answer questions.
